

# Maths

To get to the next level I need to:

1. Understand more about algebra.
2. Think about the problem and how I can solve it.
3. Practice my BEDMAS every now and then when I have time in math or at home.

I can help myself by:

- Asking people for help if I need it.
- Listen to the teacher giving examples of the math tasks to vividly see it and try to understand.
- Spend a decent 15-20 minutes at home with equations related to the math task to really get a deep understanding about it.
